Can you see me? (Variable scope)   name_____ date_____

1. Make a log of the errors that existed in the code when you first transferred it into NetBeans

Exact output of error message (first essential words)	How did you fix it?

2. Once your class has output the matches the key, complete this table

List all variables AND their type in the class that are exist in ONLY method scope: ex: `String bigBoss`	List all the variables and their type that exist in class scope:
Total number of methods:	Total lines of output:
Total number of method calls:	Total number of times execution hops between methods:
