1. Your perceptions of the strengths of this course. What particular teaching methods or assignments helped you to learn the content or the skills required in this course?

I enjoy watching through the written lectures, looking at sample code, and asking the prof. when I have a question.

2. Your perceptions of the weaknesses of this course. What particular teaching methods or assignments were not helpful to you in learning? Why not?

I was not helped by the view of programming of some assignments. I appreciate more teaching on what the compiler tells how each line works.

Uses language easy for beginners to understand, teaches in an engaging way that holds the class's attention + interest. Using the 'block' set up + the flow chart examples helped.

2. **Your perceptions of the weaknesses of this course.** What particular teaching methods or assignments were not helpful to you in learning? Why not?

Spend more time on the concepts like String methods, etc before moving into using them

3. **Your opinion of the overall effectiveness of this course.** What suggestions, if any, do you have for helping the instructor to improve the teaching methods and assignments in this course?

So far, extremely effective + understandable.
Just explain concepts a little more in-depth.

1. **Your perceptions of the strengths of this course.** What particular teaching methods or assignments helped you to learn the content or the skills required in this course?

- Great overviews of the topics for each class
- class session guides with many resources posted on his website.
- time to work on projects in class, ask for help from instructors + classmates.
- no slideshows / lectures

2. **Your perceptions of the weaknesses of this course.** What particular teaching methods or assignments were not helpful to you in learning? Why not?

We had an impromptu group project that may have been more useful with slightly more structure and guidance. On the other hand, that was a learning experience in itself.

3. **Your opinion of the overall effectiveness of this course.** What suggestions, if any, do you have for helping the instructor to improve the teaching methods and assignments in this course?

I think community college students have to be much better at selling themselves to employers than those at 4-year colleges, so emphasizing projects that are fully-formed and worthy of being on a resume would be helpful.

1. **Your perceptions of the strengths of this course.** What particular teaching methods or assignments helped you to learn the content or the skills required in this course?

This course pushes you! However, there's a nice "build" to the material. The result is that while I seldom felt I'd "mastered" any given concept before moving on, I can look back and/or revisit at past course projects and handle them better on the second pass. So incremental improvement is definitely at play, even while our scope continues to expand.

2. Your perceptions of the weaknesses of this course. What particular teaching methods or assignments were not helpful to you in learning? Why not?

Very few weaknesses. I ~~sometimes~~ struggled with a few of the project specifications in the early weeks (ie. "what is my computer program supposed to do, and possibly how?") But I haven't felt that way about any recent projects → they're all pretty clear, if sometimes challenging.

3. Your opinion of the overall effectiveness of this course. What suggestions, if any, do you have for helping the instructor to improve the teaching methods and assignments in this course?

It's an uncomfortable course at times, inasmuch as it is ambitious in scope. But I feel like we can pull off that ambition!

1. Your perceptions of the strengths of this course. What particular teaching methods or assignments helped you to learn the content or the skills required in this course?

The "flipped classroom" approach - where we get to work on assignments with the professor and other students present instead of having to struggle ~~alone~~ (entirely) alone - makes it possible to move faster through material, which is great. When there is example code to look at, that's also excellent.

2. Your perceptions of the weaknesses of this course. What particular teaching methods or assignments were not helpful to you in learning? Why not?

It would be helpful if the "right answer" (inasmuch as there is one for a coding project) could be shared, after our assignments are complete. Seeing the other students' answers is useful, but it would be nice to see how an expert approaches the problem.

3. Your opinion of the overall effectiveness of this course. What suggestions, if any, do you have for helping the instructor to improve the teaching methods and assignments in this course?

This is a great course. It moves fast without leaving anyone behind. The students feel like ~~our~~ our input into the course schedule is sought out and seriously considered. ~~Professor~~ Professor Darson has a great energy and enthusiasm for the subject that is infectious.

The assignment where we mapped visual connections from an online source, drew them, & then swapped w other students didn't seem particularly worthwhile.

1. Your perceptions of the strengths of this course. What particular teaching methods or assignments helped you to learn the content or the skills required in this course?

I'm one of those students who like lecture and learn well when material is presented in an organized way, so the parts where he shows us how to do things and talks about how data works with whiteboard illustrations are best for me. The group work breaks up the time well and is illustrative, but without taking time to cover the "right" answers, I don't get as much value out of them. He has great energy and

clearly loves the subject.

2. Your perceptions of the weaknesses of this course. What particular teaching methods or assignments were not helpful to you in learning? Why not?

I overdid my answer to #1; weaknesses went there.

3. Your opinion of the overall effectiveness of this course. What suggestions, if any, do you have for helping the instructor to improve the teaching methods and assignments in this course?

This is a solid foundation for the data analytics program! There is great coverage of how topics fit in, both the course and the field at large.

It's also an enjoyable class. The variety of topics and teaching methods helps keep students engaged for a 3-hour block at night (which could easily be miserable).

1. Your perceptions of the strengths of this course. What particular teaching methods or assignments helped you to learn the content or the skills required in this course?

The activities are fun and useful for not only review, but also teaching new concepts in a digestible, hands-on way.

Taking student examples of data and walking through an analysis or how to use a function in excel allows me to better understand the information.

2. Your perceptions of the weaknesses of this course. What particular teaching methods or assignments were not helpful to you in learning? Why not?

Nothing particularly related to the teacher, but sometimes technology doesn't work as expected and slows down the class.

3. **Your opinion of the overall effectiveness of this course.** What suggestions, if any, do you have for helping the instructor to improve the teaching methods and assignments in this course?

Homework assignments would definitely help, as the time between each class is long enough for the students to forget the information.

1. **Your perceptions of the strengths of this course.** What particular teaching methods or assignments helped you to learn the content or the skills required in this course?

The instructor was encouraging to me all the time. He teaches in a sort of "laid back" informal, unstructured teaching. This is helpful to people who don't like structure and know what they are doing. They are able to learn how to do

2. **Your perceptions of the weaknesses of this course.** What particular teaching methods or assignments were not helpful to you in learning? Why not?

I could not understand the language most of the time. This is not the instructor's fault. The deciders removed prerequisites to help understand the course but did not restructure the course.

3. **Your opinion of the overall effectiveness of this course.** What suggestions, if any, do you have for helping the instructor to improve the teaching methods and assignments in this course?

I cannot offer any suggestions to the instructor, he is super smart and caring.

1. **Your perceptions of the strengths of this course.** What particular teaching methods or assignments helped you to learn the content or the skills required in this course?

I like the collaborative nature of the class, and the open ended activities that allow for real critical and creative thinking about data and the detective work needed to interpret and utilize it.

2. **Your perceptions of the weaknesses of this course.** What particular teaching methods or assignments were not helpful to you in learning? Why not?

This class still being on its infancy poses a lot of structural problems to the curriculum. However, Mr. Darsow has done an excellent job of teaching concepts to the best of his ability under such novel circumstances. I wish the pace of the class was more coherent and cumulative.

3. **Your opinion of the overall effectiveness of this course.** What suggestions, if any, do you have for helping the instructor to improve the teaching methods and assignments in this course?

A more fleshed out progression of skills and how they fit into a broader degree program.
